

AI-Assisted Screening: A Human-Centered Framework

Balancing automation and human judgment to build faster, fairer, and more effective recruiting processes.

CORE PRINCIPLE: AI removes friction. Humans make decisions. The best recruiting processes know exactly where one ends and the other begins.

01

WHEN AI LEADS

High-volume, repeatable tasks

AI excels at tasks that are rules-based, time-consuming, and don't require nuanced human judgment. Use it here to free your team for what matters.

- JOB DESCRIPTION DRAFTING**
- Generate first drafts based on role parameters
 - Standardize language across requisitions
 - Flag titles that may limit candidate pool

- RESUME SCREENING**
- Filter for stated must-have qualifications
 - Surface candidates who may have been overlooked
 - Reduce time spent on clearly unqualified applicants

- CANDIDATE OUTREACH**
- Personalize InMail at scale using role and persona data
 - A/B test subject lines and message structure
 - Automate follow-up cadences after initial outreach

- SCHEDULING & LOGISTICS**
- Coordinate interview availability automatically
 - Send confirmations, reminders, and prep materials
 - Reduce back-and-forth between candidates and teams

- REPORTING & ANALYTICS**
- Track pipeline metrics and funnel conversion rates
 - Flag time-to-fill outliers and bottlenecks
 - Surface patterns across sourcing channels

02

WHEN HUMANS LEAD

Judgment, context, and relationship

Recruiting is fundamentally a human discipline. These are the moments where experience, empathy, and intuition are irreplaceable.

- CANDIDATE ASSESSMENT**
- Evaluate communication style, presence, and motivation
 - Probe for culture fit and long-term potential
 - Read between the lines of a career narrative

- HIRING LEADER PARTNERSHIP**
- Translate business needs into a sourcing strategy
 - Push back on unrealistic requirements or profiles
 - Build trust that sustains a long-term relationship

- OFFER & CLOSE**
- Navigate compensation conversations with care
 - Understand a candidate's competing priorities
 - Make the case for the opportunity authentically

- SENSITIVE SITUATIONS**
- Handle candidate concerns or hesitations directly
 - Manage internal vs. external candidate dynamics
 - Navigate diversity considerations thoughtfully

- FINAL HIRING DECISION**
- Synthesize all data points into a recommendation
 - Weigh team dynamics and timing alongside qualifications
 - Own the decision with confidence and accountability

03

THE GUARDRAILS

Principles for responsible AI use

AI in recruiting requires active governance. These guardrails protect candidate experience, reduce bias risk, and keep humans accountable for outcomes.

- TRANSPARENCY**
- Candidates should know when AI is part of the process
 - Hiring leaders should understand what AI is and isn't evaluating
 - Never let AI be a black box that teams can't explain

- BIAS AUDITING**
- Regularly review AI outputs for patterns across demographics
 - Do not rely on AI to solve bias; it can amplify it
 - Pair AI screening with diverse human review panels

- HUMAN OVERRIDE ALWAYS**
- AI recommendations are inputs, never final decisions
 - Any candidate filtered out by AI can be reinstated by a human
 - Build review checkpoints before candidates are rejected

- DATA HYGIENE**
- AI is only as good as the data it is trained on
 - Audit job descriptions for exclusionary language regularly
 - Keep candidate data secure and compliant at all times

- CONTINUOUS CALIBRATION**
- Track quality-of-hire for AI-assisted vs. human-led processes
 - Revisit tool effectiveness every 6 months
 - Gather candidate feedback on the screening experience
